

Portfolio Contact System Architecture & Code Guide

Complete Documentation on Form Submissions, API Flow & Line-by-Line File References

1. System Architecture & Overview

The portfolio website enables visitors to submit contact messages directly through the user interface. Submissions are seamlessly transmitted asynchronously to **dinalthathsaraperaketiya@gmail.com** using the FormSubmit AJAX service endpoint. This serverless architecture ensures instantaneous delivery without requiring an active node server backend.

Target Recipient Email	dinalthathsaraperaketiya@gmail.com
API Endpoint URL	https://formsubmit.co/ajax/dinalthathsaraperaketiya@gmail.com
Transport Protocol	HTTP POST (Asynchronous fetch API with JSON Payload)
Primary Source File	src/component/Contact.jsx
Styling & Animations	src/component/Contact.css

2. Step-by-Step Execution Workflow

- **Step 1: User Form Filling** — The visitor enters their Name, Email Address, Subject, and Message body into the HTML form inputs in Contact.jsx.
- **Step 2: Input Validation** — Upon clicking 'Send Message', handleSubmit() validates that all required fields are populated.
- **Step 3: State Transition to Submitting** — The component sets isSubmitting = true, disabling the button and showing a spinning Loader2 icon.
- **Step 4: Asynchronous AJAX Request** — React sends a fetch() request with a JSON payload containing the form fields to https://formsubmit.co/ajax/dinalthathsaraperaketiya@gmail.com.
- **Step 5: Response Evaluation** — If HTTP 200/OK is returned, submitted state is set to true, rendering the Success Card. If an error occurs, errorMsg displays a user-friendly error badge.
- **Step 6: One-Time Email Activation** — The first time a message is submitted, FormSubmit sends a 1-click confirmation email to dinalthathsaraperaketiya@gmail.com. Once clicked, all future form submissions route straight to the inbox.

3. Involved Files & Exact Code Line Breakdown

A. File: src/component/Contact.jsx

Lines 1 - 4	Imports React hooks (useState), Framer Motion, Lucide icons (Loader2, Send, Check, Mail, Copy, MapPin, Phone), and CSS stylesheet.
Lines 6 - 25	Defines contactCards data array containing email, phone (+94 776854597), and location info.

Lines 27 - 33	Contact component declaration & state hooks: <code>formData</code> , <code>isSubmitting</code> , <code>submitted</code> , <code>errorMsg</code> , <code>copiedEmail</code> .
Lines 34 - 73	handleSubmit() function: Triggers async fetch call to <code>https://formsubmit.co/ajax/dinalthathsaraperaketiya@gmail.com</code> . Handles JSON serialization, HTTP status verification, and UI state updates.
Lines 75 - 79	handleCopyEmail() function: Copies email address to clipboard and displays 2-second checkmark indicator.
Lines 173 - 242	Form JSX Rendering: Renders form inputs, error message badge, and dynamic Submit button (showing 'Sending...' spinner or 'Send Message' icon).
Lines 153 - 171	Success State Card: Displays 'Message Sent Successfully!' card with button to send another message.

Core API Request Code (Contact.jsx: Lines 42 - 57)

B. File: src/component/Contact.css

Lines 142 - 162	.submit-btn & hover: Dark background (<code>#0f172a</code>), rounded corners, elevation box-shadow on hover.
Lines 164 - 167	.submit-btn:disabled: Reduced opacity (0.7) and not-allowed cursor during active submission.
Lines 169 - 180	.spinner & @keyframes spin: 360-degree linear rotation animation for the Loader2 icon.
Lines 182 - 190	.error-message: Light red alert box (<code>#fef2f2</code>) with red border and red text for validation errors.
Lines 192 - 224	.success-message & icon: Green checkmark badge (<code>#16a34a</code>) and centered layout for success view.

C. File: src/component/Footer.jsx

Line 45	Direct email mailto link: <code>mailto:dinalthathsaraperaketiya@gmail.com</code> .
Line 52	Updated copyright footer text: '© 2026 Designed & Developed by Dinal Peraketiya Full Stack Developer'.

4. Activation & Verification Checklist

1. Open your live website portfolio or local test page.
2. Scroll down to the **Contact** section.
3. Fill in your name, email, subject, and a test message.
4. Click **Send Message** and observe the loading spinner state.
5. Open your Gmail inbox (**dinalthatsaraperaketiya@gmail.com**).
6. Open the FormSubmit automated email and click **Activate FormSubmit** once.
7. Done! All future contact form entries will instantly land in your email inbox.
